Highlight - Recovery Case

Indianapolis, Indiana | Electronics | August, 24

Overhaul's GSOC and LE Connect executed a successful recovery of two full truckloads of high-value consumer electronics, worth over \$500,000 USD, which were stolen while in transit across multiple states.

The shipments originated in Fort Worth, TX and were en route to Indianapolis when the carriers became non-responsive. Upon notification of the theft, the Overhaul's LE Connect team got into action and coordinated with the Indiana State Police to recover the stolen goods through multiple jurisdictions.

Despite the drivers' attempt to thwart recovery efforts by switching the tractor on the trailers and opening packages, Overhaul's team was able to provide live locations and photos of the trailers to the responding officers, leading to the successful recovery of both trailers.

This success story is a testament to Overhaul's commitment to providing top-notch logistics risk management services to prevent cargo loss through theft, quality, or other issues while in transit across all modes of transport.
